

DployStrategy™

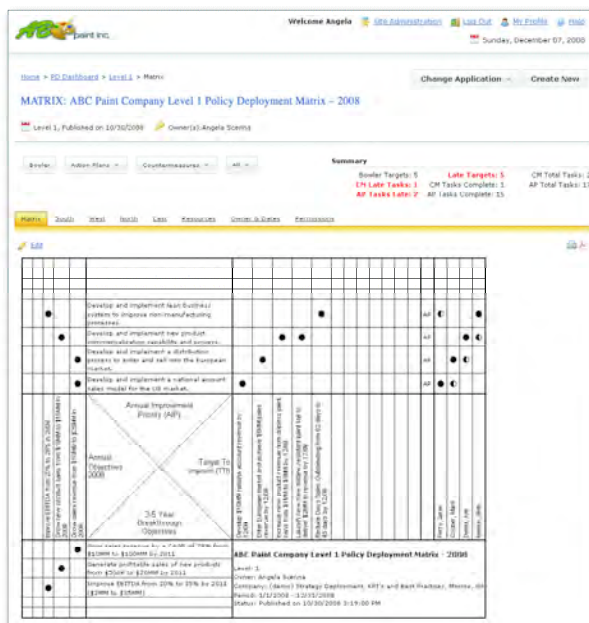

With policy deployment you have a process for focusing on your breakthrough objectives, a way to drive financial success within your business, and an effective approach to align corporate strategy and objectives with day-to-day efforts.

Add Dploy Strategy into the mix and you provide greater enterprise-wide visibility to critical policy deployment projects and results.

Why use a web-based solution for policy deployment?

- Better execution of strategic objectives
- Efficiently, affordably transform your strategy into measurable results
- Align your company resources with critical tasks
- Focus entire organization on breakthrough versus fire-fighting
- Develop a culture of disciplined, continuous improvement
- Achieve global visibility on projects and their results.

“Dploy helps us keep on track of who is doing what. No surprises; it’s all updated. Everybody can collaborate and see what everybody’s doing. It eliminates duplication of work.”
—Rich Baehr, Plant Manager
Jacuzzi Luxury Baths

Dploy Strategy features a series of dashboards in a web-based, visual environment that make it easier than ever to become a results-driven organization.

Highlights include:

- Easy set-up of an X-Matrix allows you to instantly see what your organization needs to achieve over the next 3–5 years.
- Targets to improve flow directly into a bowling chart that enables easy tracking of quantifiable, measurable performance versus goal. Project owners update status regularly, from anywhere, at any time.
- The action planning tools helps you to proactively identify and remove road blocks to success. Clearly identify critical-path actions, see who’s responsible for delivering what and when, and monitor progress regularly.
- The countermeasure function allows policy deployment owners to get back on track when things fall behind. Simple charts help to identify problems, address issues, and fix them using the discipline of root-cause analysis and action planning.
